

BRAND & DESIGN GUIDE

BUILT ON RESTRAINT.

The visual system for **BMC|COLLECTIVE** — Darren Hardy's Business Master Class. Near-monochrome, Inter-only, one chromatic accent applied with discipline. Premium comes from type and space, not decoration.

 01 · FOUNDATIONS

THE PRINCIPLES.

Three rules govern everything. Hold these and the brand can't drift.

Typeface	Inter — everywhere. No second family, ever. Hierarchy is built from weight + size + letter-spacing + color, never new fonts. Weights in use: 400 body · 500 labels · 600 emphasis · 700 names · 800–900 display.
One accent	A single chromatic accent , applied sparingly. cyan on dark backgrounds, plum on light. Gold is reserved for review stars; purple/magenta only for the ambient wash. Everything else is near-monochrome.
Case & space	Display, eyebrows, labels, chips, titles are UPPERCASE ; body + quotes are sentence case. Generous space on desktop; tightened & uniform on mobile. Flat, bordered, sharp — borders over shadows.

PRIME DIRECTIVE

The brand is implicit restraint. One typeface, one accent, lots of space. If a choice adds decoration instead of clarity, it's wrong.

02 · COLOR TOKENS

THE PALETTE.

Every value is a `:root` token in `bmc.css` — rules reference the vars so the page can never drift from the brand. Brand hues carry an `-rgb` companion for any opacity.

BRAND PALETTE

**--bmc-cyan**

#78e4ef

Accent on DARK — em.key, ghost CTA, play buttons, card titles.

#4b2c6a

Accent on LIGHT — em.key + titles on bone.

**--gold**

#f5b301

Review stars only. Never type or UI.

**--bmc-purple / magenta**

#9c27ac · #d62a8f

Ambient wash backgrounds only.

— 03 · ACCENT LOGIC

CYAN ON DARK. PLUM ON LIGHT.

The single rule that governs the whole page. The accent is the same *idea* in both modes — it just changes hue so it stays legible and premium. Cyan washes out on white; plum disappears on black.

DARK SURFACE → CYAN

**YOUR SECRET
WEAPON.**

On any dark section, emphasis, `em.key`, titles, and CTAs are **cyan**.

LIGHT SURFACE → PLUM

**REAL BUILDERS.
REAL RESULTS.**

On any light section, the very same role lands in **plum** instead — readable + premium.

Exception: functional cyan UI that lives on media — play buttons, video controls — stays cyan regardless of the surrounding section, because it sits on imagery.

— 04 · TYPOGRAPHY

ONE FAMILY, MANY VOICES.

Inter does all the work. Hierarchy comes from weight, size, tracking and color
— never a second face.

PUTTING IT TOGETHER.

Spacing

Container `max 1380px`, side pad 48px / 24px mobile. Desktop section padding is generous + varied (120–200px). Mobile is **uniform 72px** top/bottom — open space is the brand, but never sprawl on a phone.

Radius & elevation

One radius: `4px` (cards/chips/badges); circles 50%. Prefer **borders over shadows** — cards go cyan-bordered on hover, not heavy lifts.

Motion

Subtle scroll-reveal (short fade-up, easing `cubic-bezier(.16,1,.3,1)`). Fires as the top edge enters. Respects `prefers-reduced-motion`. No bounce, no spin.

Testimonial imagery

Static cards: 3:2, deep-plum bg + soft glow. Video stills: 16:9, cyan→purple duotone, subject left, eye contact, open lower-right for the play button. **Head size consistent** across every image.

DO

- ✓ Build hierarchy with Inter weight/size/tracking + the one accent.
- ✓ Cyan on dark, plum on light — always.
- ✓ Reference tokens (var(--...)), never raw hex.
- ✓ Let desktop breathe; unify spacing on mobile.

DON'T

- ✗ Add a second typeface or a third accent color.
- ✗ Use gold anywhere but stars, or the wash anywhere but backgrounds.
- ✗ Use cyan on light (use plum), or plum on dark (use cyan).
- ✗ Add heavy shadows or large rounded corners.

Source of truth: **design-system.md** + the `:root` token block in **bmc.css**. This guide is generated from them — keep all three in sync.
